Agroforestry Intelligence

GOLDENFORESTS AGARWOOD INVESTMENT EXPOSÉ

Sustainable ownership of one of the world's most valuable natural assets.

Cultivated on privately managed plantations in the Philippines.

JULY 2026

WHAT IS AGARWOOD?

How Agarwood Forms

When Aquilaria trees become infected by specific fungi, they produce a dark, fragrant resinous heartwood as a defence mechanism. This rare natural process creates agarwood, prized globally for its complex aromatic properties.

In nature, this resin formation occurs randomly and infrequently. Modern plantation cultivation uses scientifically validated inoculation technology to induce controlled resin production, enabling a sustainable supply whilst protecting endangered wild populations.

1. Healthy Aquilaria Tree

Living Aquilaria tree with clean, pale sapwood.

2. Fungal Inoculation

Specific fungus introduced into the tree, inducing stress.

3. Resin Formation

Tree produces aromatic resin as a defense mechanism, turning sapwood darker.

4. Dark Aromatic Heartwood

The prized dark resin-infused wood (agarwood) is formed and harvested.

Why Agarwood Industry?

Highly Prized Product

Widely used in fragrance, incense, medicines, and aromatherapy as well as in cultural religious ceremonies.

Steady & Positive Demand

Agarwood's trading volume has surged steadily for the past 10 years as its popularity in fragrance and medicinal value.

Hedge Against Inflation

Agarwood timber is an excellent asset to hedge against inflation plus will agarwood declining supply internationally.

Prevent Deforestation

Your participation will not only help the local planters but also reduce the effect of global warming.

Multi-Billion Dollar Industry

Agarwood aroma can't be duplicated and has a high demand in the fragrance industry as the base note ingredient.

We Take Care of it

There is a big difference between a tree that can produce 15% agarwood resin Versus 80% agarwood resin-like we do.

An inflation-proof investment

A recession-proof investment

A stress-free investment

Ancient Luxury, Modern Demand

or centuries, agarwood has been valued across Middle Eastern, Asian and Southeast Asian cultures. Today, international demand spans multiple premium sectors:

Luxury Perfumery

Key ingredient in premium fragrances from Tom Ford, Chanel, Creed, Maison Francis Kurkdjian, and other major luxury houses. Over 1,000 new oud-containing fragrances launch annually in international markets.

Traditional Incense

Sacred and ceremonial applications, particularly bakhour in Middle Eastern cultures. Sustained demand across Gulf region and Islamic markets.

Traditional Medicine

Therapeutic properties valued in Asian medical systems for digestive health, stress relief, and spiritual wellbeing.

High-End Specialty Items

Carvings, decorative objects, prayer beads, and luxury collectibles crafted from premium agarwood.

Market Pricing

Agarwood’s rarity and sustained luxury demand support exceptional pricing:

1	Medium Grade Oud Wood Chips		USD 1,100-1,600 /kg
2	AA+ to AAA+ Grade Oud Wood Chips		USD 1,450-2,300 /kg
3	Premium Grades		USD 2,500-4,000+ /kg
4	Distilled Oud Essential Oil		USD 10,000-40,000 /litre

THE GLOBAL AGARWOOD OPPORTUNITY

High-Value Commodity in Expanding Global Markets

Agarwood commands premium positioning in global luxury markets, with demand significantly outpacing sustainable supply. Market growth is driven by expanding affluent consumer bases in Middle Eastern and Asian economies, coupled with accelerating Western adoption in luxury perfumery.

Market Size and Growth Trajectory

Note: Market size estimates vary by source and methodology. Growth driven by expanding luxury demand in Middle East, Asia, and Western markets. Source: Precedence Research 2024.

Primary International Markets

Middle East | United Arab Emirates, Saudi Arabia, Qatar, Kuwait

The largest established market for agarwood products. Deep cultural integration in traditional incense (bakhoor), luxury fragrances and personal use. UAE and Saudi Arabia function as major import hubs and redistribution centres.

East Asia | China, Japan, South Korea, Taiwan

Rapidly growing demand for traditional medicine applications and luxury fragrances. China's expanding affluent consumer base drives significant growth in consumption. Premium emphasis on quality, purity and sustainable sourcing credentials.

Europe and North America

Accelerating adoption in luxury perfumery segments. Major international fragrance houses incorporate oud as a distinctive premium ingredient. Growing consumer awareness of sustainability credentials favours plantation-sourced material.

SUPPLY CONSTRAINTS DRIVE PREMIUM PRICING

Wild Populations Under Critical Protection

Wild agarwood populations face critical endangerment due to historical overharvesting. Since 1995, all *Aquilaria* species have been listed under CITES Appendix II, the international treaty regulating trade in endangered species.

Wild-sourced agarwood:
RESTRICTED TRADE

Plantation-grown material from licensed operations:
PERMITTED

The Sustainable Plantation Advantage

Modern plantation cultivation using scientifically validated inoculation methods enables sustainable resin production under controlled conditions. This approach:

- Protects remaining natural forests from harvest pressure
- Provides legal, authenticated supply chain documentation
- Ensures consistent quality through controlled production methods
- Meets increasing buyer requirements for sustainability credentials

Regulatory Frameworks Favour Plantation Material

While wild harvesting remains legal with stringent permits and declining quotas, international buyers, particularly in developed markets, increasingly require CITES documentation, origin certification and sustainability credentials. Plantation-grown material from licensed operations enjoys preferential market access, simpler certification processes, and premium pricing outcomes.

GOLDEN FORESTS COMPETITIVE ADVANTAGES

The Premier Agarwood Species

Golden Forests cultivates *Aquilaria crassna* exclusively, the most commercially valuable agarwood species in international markets.

Source: Species Market Analysis / ScienceDirect.com. Golden Forests Business Plan, January 2026, Appendix G

Elite Thai Genetics

Golden Forests sources premium *Aquilaria crassna* seedlings exclusively from CITES-certified Thai nurseries with documented provenance. Thai genetic material is internationally recognised for:

- Consistent resin formation and predictable yields
- Superior aromatic profiles preferred by distillers and buyers
- Enhanced market acceptance and premium pricing outcomes
- Genetic authenticity verified through supply chain documentation

Competitive Advantage

Alternative species, particularly *Aquilaria malaccensis*, predominantly sourced from India, command lower market pricing due to inferior resin quality and aromatic characteristics. Thai *Aquilaria crassna* maintains consistent premium positioning across all international buyer segments.

Estimated Global Market Share of *Aquilaria* Species

Optimised Plantation Spacing and Community Impact

Golden Forests employs strategic 3m × 2m agarwood spacing (versus industry-standard 2m × 2m) to enable cassava intercropping during the critical first two years of tree establishment. Cassava plants provide natural shade for young *Aquilaria crassna* seedlings whilst roots improve soil structure and nutrient cycling. Cassava is harvested in year 3 and distributed to local communities at no charge. This intercropping protocol delivers three distinct advantages:

- Enhanced tree survival rates through natural shade provision during the vulnerable establishment phase
- Improved soil quality and organic matter from cassava root systems
- Measurable community benefit through food security contribution (cassava is a staple in the Philippine diet)

Following cassava removal in year 3, agarwood trees benefit from full sun exposure and mature spacing appropriate for optimal crown development and long-term plantation health.

INVESTMENT AT A GLANCE

Share Subscription Structure

The minimum subscription for corporate investors is **USD\$100,000 of shares**, subject to the definitive subscription documents.

Investors subscribe for shares in a Singapore Variable Capital Company (VCC) fund, with the agarwood assets held in a designated Sub Fund. The subscription price is structured to correspond to one agarwood tree per share (a “tree-equivalent share”) at **USD \$301.71** per share. Of this amount, **USD \$173.10** is retained in a reserve account administered by the VCC fund administrator and is disbursed annually from year 7 onwards to offset future costs for inoculation, harvesting, extraction, packaging and logistics.

Investors do not directly own individual trees. Instead, they hold shares in a pooled fund that administers and manages the tree inventory. Trees managed by the fund will be recorded with GPS coordinates, inventory reference numbers and, where applicable, supporting photographs, providing evidence of the trees corresponding to the shares subscribed in VCC Sub Fund.

Share Pricing Structure

The share price is based on the initial investment of USD \$301.71 per tree and is based on the following Use of Proceeds

Year 0 Use of Proceeds Category	Per Tree (USD)	Illustrative Purpose
seedling	30.00	Importation and approximately 10 months of nursery propagation.
Establishment and maintenance	9.99	Land lease (10 years), Pruning, ring weeding, pest control, and fertilization during the early period.
Capex	5.94	Drip irrigation, farm equipment, transport, and plantation security.
Management, payroll, and overhead	24.00	Illustrative management, payroll, and overhead allocation.
Plantation Service fee	30.38	Illustrative plantation service and support cost allocation.
Audit and reporting	2.11	Illustrative verification, audit, certification and reporting allocation.
Subscription placement fee	27.43	Commissions paid to private placement agents/advisors for subscriptions secured from their client base
Total Year 0 agarwood use of proceeds	128.61	Illustrative Year 0 investor subscription per agarwood tree-equivalent Share

Per-Tree Year 7 -10 Share Capital Reserve

Later-Stage Use of Proceeds Category	Per Tree (USD)	Illustrative Purpose
Inoculation	42.35	Illustrative inoculation cost for Years 7–8.
Harvesting	19.05	Illustrative harvest cost for Years 9–10.
Extraction	95.20	Illustrative extraction cost for Years 9–10.
Packaging and logistics	16.50	Illustrative packaging, logistics, certification, customs and security allocation linked to harvest realization.
Total later-stage reserve capital	173.10	Later-stage investor capital allocation per agarwood tree-equivalent share

CORE INVESTMENT METRICS AND INCOME - AGARWOOD

The table below summarizes the income mechanics for an illustrative **331-tree** agarwood allocation, using the stated yield and pricing assumptions. Any income (if any) depends on realized yields, product quality, market pricing, costs, fees, taxes, and successful harvesting and sales to third-party buyers. Nothing in this table should be read as a guarantee of income.

Investor Terms at a Glance	
Investment	\$100,000 paid upfront
Purchase Price	\$301.71 per tree
Trees Purchased	331 trees
Additional Investor Capital	None after the initial investment; reserve funds are retained within the upfront payment.
Harvest Years	Years 9 and 10
Estimated Net Profit	\$413,336 (17.88% annualized IRR)

Note: All investor funds are paid upfront. Any reserve allocation is retained within the initial investment and does not represent an additional capital call in later years.

Illustrative Calculation Inputs (Agarwood)	
Tree-equivalent shares	331
Initial cost of shares	USD 100,000
Reserve Capital managed by the fund (year 7-10)	USD 57,296 (USD 173.10 x 331 trees)
Harvest schedule	Year 9 = 50% harvest (165 trees); Year 10 = 50% harvest (166 trees)
Yield assumption (oud wood chips)	1.5 kg per tree in year 9 2.0 kg per tree in year 10
Commission (Company)	10% of gross sales price of Oud wood chips
Price assumption	USD 984.25 kg (year 9 and 10) (current price of 775 kg +3% price escalation over 9 years)
Derived product volume (per harvest year)	Year 9 = 247.5 kg (1.50 kg x 165 trees) Year 10 = 332.0 kg (2.00 kg x 166 trees)
Derived gross sales value (per harvest year)	Year 9 = USD 243,602 (247.5 kg x USD 984.25) Year 10= USD 326,771 (332 kg x USD 984.25)
10% Commission	Year 9 USD 24,360 (USD 243,602 x 10%) Year 10 USD 32,677 (USD 326,771 x 10%)
Total net harvest proceeds (Years 9–10)	USD 413,336 (Year 9 + Year 10 less initial cost of shares)

GOLDEN FORESTS COMPETITIVE ADVANTAGES

Exclusive Forestry Industry Organization (FIO) Inoculation Technology

Proprietary technology from Thailand's leading forestry research institute, licensed exclusively for Philippine operations.

Creates a competitive barrier preventing replication by other operators. Ensures predictable resin formation, optimised yields and consistent quality outcomes essential for premium market positioning.

Elite Thai *Aquilaria crassna* Genetics

Premium seedlings sourced exclusively from Thailand with CITES certification and documented DNA genetic provenance

Thai genetics command 21.25% global market share and superior pricing. DNA genetic authenticity verified through supply chain documentation supporting premium market access

First-Mover Regulatory Advantage

First and only company licensed by the Philippine DENR to cultivate exotic *Aquilaria crassna*.

Regulatory exclusivity creates market barriers. Competitors face extended permitting timelines and uncertain approval outcomes. Validates business model through government endorsement.

Audit and Reporting

Annual independent audits verify managed Fund tree inventory counts and KPI reporting.

Institutional-grade due diligence standards support professional investor requirements and family office transparency expectations.

Measurable Sustainability Impact

1:1 native species reforestation programme. One Philippine endemic tree is planted for every commercial tree sold.

FSC certification pursuit validates sustainability claims. ESG credentials support institutional investor requirements.

HOW THE INVESTMENT WORKS

Professional Lifecycle Management

Golden Forests provides comprehensive turnkey plantation management:

- 1 Years 1-6: Establishment and Cultivation**
Professional planting, weed control, pest management, fertilisation, irrigation, mortality monitoring with 20% buffer replacement guarantee
- 2 Year 7-8: FIO Inoculation Technology**
Proprietary inoculation process inducing controlled resin formation throughout the heartwood
- 3 Years 8-9: Resin Maturation and Harvest Preparation**
Monitoring resin development, quality sampling and international buyer relationship development
- 4 Years 9-10: Coordinated Harvest and Sale**
50% of the client portfolio is harvested each year. Net harvest proceeds are distributed to investors by 31 December of the harvest year, following extraction, grading, authentication, and sale of wood chips to international buyers

AI-ENABLED PLANTATION INTELLIGENCE

AERIAL SURVEILLANCE

GIS DATA MAPPING

PRECISION FIELD SENSORS

DATA ANALYTICS PLATFORM

Advanced Technology Integration

Golden Forests operates a proprietary Agroforestry Intelligence management platform integrating real-time environmental monitoring, predictive analytics and precision agriculture techniques.

Environmental Monitoring

Soil moisture sensors, temperature and rainfall tracking, microclimate analysis supporting optimised growing conditions.

Drone-Based Crop Management and Health Surveillance

Efficient application of foliar fertilisation and distribution of pest and disease applications. Regular aerial canopy analysis, early pest and disease detection systems, precision mapping and documentation.

Precision Input Application

Data-driven fertilisation schedules, targeted irrigation protocols and integrated pest management.

Satellite-Based Geotagging and Yield Estimation

GPS verification systems, biomass modelling and harvest forecasting, performance tracking dashboards.

Operational Excellence Through Technology

Technology integration enhances productivity, reduces input waste, improves risk management, and supports transparent data-driven decision-making across all plantation activities

SCIENTIFIC EXCELLENCE AND PARTNERSHIPS

80+ Years Combined Management Experience

Golden Forests' leadership brings extensive expertise across plantation establishment, tropical horticulture, agroforestry systems, and international commodity markets.

Scientific Advisory Leadership Scientific Advisory Leadership

Golden Forests' scientific operations are directed by seasoned agricultural professionals who bring rigorous academic credentials and decades of practical field experience:

Marciano Gecolea, Agroforestry Director, Licensed Forester with over 30 years specialising in agarwood cultivation and sustainable agroforestry systems. Former Regional Forestry Director for Asia Plantation Capital across Southeast Asia. Holds a master's degree in resource management (Lincoln University, New Zealand) and BS Forestry (UP Los Baños).

Leading Philippine Research Partnerships

Collaborative relationships with premier agricultural research institutions provide access to cutting-edge research, technical expertise and continuous operational improvement.

Visayas State University (VSU)

- Agricultural systems optimisation, soil science analysis, and integrated pest management protocols

University of the Philippines Los Baños (UPLB)

Scientific Validation and Credibility

University partnerships provide third-party scientific validation, support continuous operational improvement, and enhance institutional credibility with sophisticated investors.

Research collaboration ensures Golden Forests incorporates the latest findings, maintains best-practice standards, and delivers consistent quality outcomes.

SUSTAINABILITY & ENVIRONMENTAL IMPACT

1:1 Native Species Reforestation Programme

For every commercial agarwood tree sold to clients, Golden Forests plants one Philippine endemic tree species at no additional cost.

Native species selections include Narra (*Pterocarpus indicus*), Agoho (*Casuarina equisetifolia*), Mangono (*Diplodiscus paniculatus*), Molave (*Vitex parviflora*), and Talisay (*Terminalia catappa*).

Quantified Environmental Benefits

Forest Stewardship Council (FSC) Certification

The Program for the Endorsement of Forest Certification (PEFC) Golden Forests is actively pursuing PEFC certification, the internationally recognised standard for responsible forest management, validating:

- Environmental responsibility (biodiversity, water resources, soil quality protection)
- Social responsibility (fair labour practices, community consultation)
- Economic viability (sustainable long-term business operation)

FSC certification provides independent third-party verification of sustainability claims, supports premium market access and meets institutional investor ESG due diligence requirements.

Four-Layer Protection Framework

1. Mortality Buffer and Replacement Guarantee

Golden Forests maintains 20% surplus planting beyond the client-owned tree inventory. If mortality exceeds normal expectations, buffer trees are vested to affected clients at no additional cost, maintaining target portfolio sizes.

3. Comprehensive Insurance Coverage

Plantation operations maintain insurance protection against fire, storm damage, flooding, pest or disease outbreaks, theft, vandalism and third-party liability. Policies are placed with the Philippine Crop Insurance Corporation (PCIC) and reviewed annually.

4. Regulatory Compliance and Certification

Full compliance with CITES export permitting, DENR licensing, and Philippine regulatory frameworks. Pursuing Forest Stewardship Council (FSC) certification validating responsible forest management. Established relationships with regulatory authorities ensure smooth export processes.

5. Professional Management and Scientific Oversight

80+ years of combined management experience. Scientific advisory from leading Philippine universities (VSU, UPLB). Annual independent audits verify managed fund tree inventory counts. GPS verification and transparent KPI reporting throughout the investment lifecycle.

COMBINED PORTFOLIO BENEFITS

Investors may combine agarwood and Sweet Elena Carabao Mango tree ownership within unified, diversified agroforestry portfolios. Combined portfolios deliver superior risk-adjusted income through:

Harvest Timeline Diversification

Mango produces annual cash flows (years 5-25) whilst agarwood delivers concentrated returns (years 9-10)

Market Risk Mitigation

Exposure to distinct commodity markets (luxury oud vs. premium fruit) reduces single-market concentration

This entry-level combined portfolio delivers:

Immediate diversification across two high-value crops

Timeline stagger: Agarwood harvest years 9-10, Mango annual production years 5-25

Market exposure: Luxury fragrance + premium agriculture

Manageable initial **commitment** with option to scale

NOTICES & DISCLAIMERS

Forward-Looking Statements

This Exposé may contain forward-looking statements regarding market conditions, agricultural operations, harvesting, processing, and other operational outcomes. Actual results may differ materially due to factors including biological, operational, regulatory, and market risks. This document does not present annualised returns, IRR, or other performance projections, and no representation is made that any investor will receive distributions or recover invested capital.

Risk Factors

Agricultural investments carry biological risks (tree mortality, pest outbreaks, yield variability), market risks (pricing fluctuations, demand shifts), operational risks (management performance, harvest execution), regulatory risks (policy changes, export restrictions), and liquidity risks (no secondary market, 10-year holding period). Comprehensive risk discussion available in Golden Forests Business Plan.

Not an Offer to Sell Securities

This document is provided for information purposes only and does not constitute an offer, solicitation, or recommendation to subscribe for or purchase any securities in any jurisdiction. Any investment, if made, would be made only through definitive legal documentation and applicable subscription materials for the relevant SPV, and only to eligible investors in compliance with applicable laws and regulations. Prospective investors should seek independent legal, tax, and financial advice before making any investment decision.

Qualified Investors Only

This opportunity is intended only for eligible non-retail investors who meet relevant regulatory thresholds in their jurisdiction and who can bear the risks of an illiquid investment. **This opportunity is not offered to retail investors** and may be marketed only to eligible **corporate** counterparties such as established high-net-worth family groups / family offices, institutions, and sovereign wealth funds (or other similarly qualified non-retail investors), in each case subject to applicable laws and regulations. The minimum subscription for corporate investors is **USD 100,000 of shares** (or such other amount as may be specified in the definitive SPV documentation), and all terms are governed by the relevant SPV offering and subscription documents.

Independent Professional Advice Required

Information provided is for educational and informational purposes only. It does not constitute investment advice, financial planning guidance, or suitability determinations. Prospective investors must engage independent professional advisors (financial planners, legal counsel, tax specialists, agricultural consultants) to evaluate appropriateness for their specific circumstances.

Confidential Information

This Exposé contains confidential business information and proprietary methodologies. Recipients agree to maintain confidentiality and refrain from unauthorised disclosure or distribution.
