

GOLDEN FORESTS

Agroforestry Intelligence
Regulated Access to Sustainable Agroforestry.

ABOUT GOLDEN FORESTS

Golden Forests provides access to managed agroforestry exposure in the Philippines through a shareholding structure in a Singapore MAS Regulated Sub Fund, Licensed Private Placement Intermediaries, Parent Company in the UAE and Operating Company in the Philippines. Each share corresponds to the value attributed to one underlying tree within professionally managed plantation operations. Agroforestry is generally characterised by long-term biological growth cycles and real-asset backing. The underlying strategy is designed for long-term capital participation in productive agricultural assets. Income is linked to harvest outcomes and operational performance of the underlying plantations, including harvested agarwood oud wood chips and mango fruits, supported by AI-enabled plantation management, cultivation technologies and structured operational oversight.

VISION

To advance sustainable agroforestry in Asia through disciplined cultivation, scientific research and technology-enabled operations, supporting long-term asset stewardship, resilient ecosystems and community development.

MISSION

Our mission is to operate a sustainable and professionally managed agroforestry platform focused on premium crops with long cultivation cycles and real-economy harvest income. The underlying strategy is designed for long-term capital participation in productive agricultural assets. Through structured governance, production standards and community partnership, we seek to support responsible capital formation, environmental sustainability and enduring operational value for shareholders, ecosystems and the communities we serve.

KEY DIFFERENTIATORS

- **80+ Years Combined Management Experience:** Proven leadership across agroforestry and emerging markets
 - **Technology Access:** Licensed inoculation formulas from Thailand's Forestry Industry Organization (FIO) and DNA-verified Thai genetics
 - **Regulatory Permitting:** Department of Environment and Natural Resources (DENR) Wildlife Permit for *Aquilaria crassna* cultivation
 - **Scientific Partnerships:** President Ramon Magsaysay State University (PRMSU), Visayas State University (VSU) and University of the Philippines Los Baños (UPLB) supporting cultivation research
- **AI-Enabled Plantation Intelligence:** Proprietary monitoring with drone surveillance and predictive analytics
- **1:1 Reforestation Programme:** One native Philippine tree planted for each corresponding underlying tree represented in the Sub Fund share allocation model

UNDERLYING ASSETS & SHARE CLASSES

***Aquilaria crassna* agarwood** | Income derived from harvested agarwood oud wood chips | Years 9-10 harvest | Subscription price per share: USD \$301.71, of which USD \$173.10 is retained by the VCC in a reserve fund to meet estimated costs for years 7-10

Sweet Elena mango | Income derived from mango fruit harvests | Years 5-25 production | Subscription price per share: USD \$371.64, with USD \$31.73 deducted from mango proceeds to meet estimated harvesting costs for years 5-15
Each share represents the value attributed to one underlying tree for allocation and tracking purposes only. Shareholders do not acquire direct ownership of, or any proprietary interest in, any individual tree.

KEY TERMS & ACRONYMS

Agroforestry Intelligence

Golden Forests' proprietary framework integrating agronomic science, AI-enabled monitoring systems and structured plantation management to support cultivation oversight across the plantation lifecycle.

Aquilaria crassna

Aquilaria crassna is a commercially cultivated agarwood species used in the production of oud wood and related products. Golden Forests cultivates this species using Thai genetics within its Philippine plantation operations.

FIO (Forestry Industry Organization)

Thailand-based forestry research institute providing agarwood inoculation technology licensed for Golden Forests' Philippine operations.

DENR (Department of Environment and Natural Resources)

Philippine government agency responsible for environmental regulation and wildlife permits. Golden Forests holds a Wildlife Permit for *Aquilaria crassna* cultivation.

PRMSU, VSU, UPLB

President Ramon Magsaysay State University, Visayas State University and University of the Philippines Los Baños. Philippine agricultural research institutions supporting Golden Forests' cultivation research, variety development and sustainable agroforestry practices.

CITES (Convention on International Trade in Endangered Species)

International treaty regulating trade in endangered species. All *Aquilaria* species have been listed under CITES Appendix II since 1995, and trade in plantation-grown material remains subject to applicable licensing and certification requirements.

DISCLOSURE & RISK FACTORS

This document is provided for information purposes only and does not constitute an offer to sell, a solicitation to buy, or investment, legal, tax or regulatory advice. Any subscription for shares in the relevant Sub-Fund may only be made on the basis of final offering documents and applicable transaction materials and should be considered only after independent review by prospective subscribers and their professional advisers. Any income, distributions or value outcomes are subject to the terms of the Sub Fund, underlying operational performance, applicable laws and regulations, and no assurance is given that any particular outcome will be achieved.

Prospective subscribers should carefully consider, among others, the following risk factors:

- Biological and agricultural risks, including climate variability, disease, pests and other natural events that may affect cultivation, harvest timing and output.
- Operational risks, including execution, supply chain, processing, staffing, technology and site management factors that may affect plantation performance.
- Regulatory and legal risks, including permitting, trade, licensing, tax and cross-border compliance requirements applicable to the Sub Fund and underlying operations.
- Market and liquidity risks, including fluctuations in demand, pricing, distribution timing, and the limited liquidity typically associated with private Sub Fund shareholdings.
