GOLDEN FORESTS MANGO INVESTMENT EXPOSÉ

Sustainable ownership of the Philippines' most prized agricultural export:
the world's sweetest premium mango

Cultivated on privately managed plantations in the Philippines.

July 2026

WHAT IS SWEET ELENA MANGO?

The Premium Philippine Mango

Sweet Elena Mango is a premium variety of mango, recognized as the Philippines' finest mango cultivar. Internationally acclaimed for its exceptional sweetness, smooth texture and golden flesh, Sweet Elena is rated amongst the world's finest mangoes and commands premium pricing in international markets.

Golden Forests scientifically propagated a proprietary Sweet Elena hybrid, an advanced variety combining Carabao and Elena genetics with dwarfing techniques. The grafted Sweet Elena mango produces fruit with enhanced sweetness characteristics, combining the best attributes of both parent varieties, whilst the dwarfing techniques enable high-density commercial production.

Four Primary Market Applications

Premium Fresh Fruit Export: Middle Eastern and Asian markets (UAE, Saudi Arabia, Kuwait, Hong Kong, Singapore, South Korea) pay premium prices for Philippine Carabao mangoes, particularly during peak demand periods.

Dried Mango Products: Dehydrated mango for export to North America, Europe and Asia. Philippine dried mango is recognized globally for its superior quality and sweetness.

Juice and Processing: Premium mango juice, purees and concentrates for food manufacturing, hospitality sector and beverage industry.

Domestic Premium Market: Urban Philippine consumers pay premium prices for high-grade Carabao mangoes.

Market Pricing

Carabao mango pricing varies by grade, season and destination market:

(Source: Tridge – Global Wholesale Market Prices, IMARC Group – Mangoes Pricing Report, Selina Wamucii – Mangoes Price Insights, Expana – Mango Prices and Global Trade Data, Procurement Resource – Mango Price Trend, USDA Economic Research Service (ERS) – Fruit and Vegetable Prices, GEPA Exporters Portal – Global Market Overview of Mangoes)

THE GLOBAL MANGO OPPORTUNITY

The global mango market demonstrates robust growth driven by rising affluent consumer demand in Asia and the Middle East, increasing health consciousness in Western markets and expanding processed mango product categories. The global mango market size stands at USD 55.20 billion in 2025 and is projected to reach USD 68.30 billion by 2030 (Moore Intelligence 2025), reflecting a 4.4% CAGR through the forecast window.

Market Growth Dynamics

Global mango production and trade is expanding steadily, with premium varieties commanding significant price premiums over commodity grades. Philippine Carabao mango recognised as amongst the world's finest varieties, enabling export price premiums of 50-100% versus standard mango varieties

Primary International Markets

Middle East | UAE, Saudi Arabia, Kuwait, Qatar

Strong consumer preference for sweet varieties. Established trade relationships. Premium pricing tolerance. Year-round demand with Ramadan peaks. Philippine Carabao recognised for exceptional sweetness, matching regional taste preferences.

East Asia | Hong Kong, Singapore, South Korea, Japan

Rapidly growing affluent consumer base with quality-focused purchasing. Premium emphasis on sweetness, appearance, and varietal authenticity. Japanese and South Korean markets value the Philippine Carabao provenance. Singapore and Hong Kong serve as regional distribution hubs.

Europe and North America

Growing health-conscious consumers are seeking premium tropical fruits. Established Filipino and Asian diaspora communities provide foundational demand. Dried mango products command a significant Western market share. Premium fresh Carabao exported to the UK, US and European markets.

THE SWEET ELENA ADVANTAGE

The Sweet Elena mango is a proprietary mango hybrid developed through collaboration with President Ramon Magsaysay State University (PRMSU) and exclusive to Golden Forests. This advanced variety combines premium Carabao and Elena genetics with innovative dwarfing techniques, delivering exceptional sweetness and fruit quality whilst enabling high-density commercial cultivation.

Superior Cultivation Characteristics

Source: Golden Forests Business Plan, January 2026. PRMSU Hybrid Development Programme.

Proprietary PRMSU-Developed Genetics

Golden Forests holds exclusive cultivation rights to this proprietary hybrid, unavailable to competitors. Developed through multi-year collaboration with PRMSU scientists, the variety represents the intersection of traditional Sweet Elena excellence and modern horticultural scientific innovation.

The grafting process combines Elena bud stock with Carabao seedlings, incorporating advanced dwarfing techniques that maintain premium fruit characteristics whilst enabling compact tree architecture. PRMSU's ongoing research partnership ensures continuous cultivar improvement and scientific validation of cultivation protocols.

Competitive Advantage

Traditional Carabao mango cultivation requires 100-150 trees per hectare with standard spacing. Dwarf Sweet Elena's compact architecture enables 416 trees per hectare, facilitating more efficient plantation management, streamlined harvest operations and enhanced pest and disease control. The height limitation and tree architecture allow for the engagement of agricultural drones for applying foliar fertilization and pest and disease applications in an efficient and controlled environment. High-density cultivation delivers superior operational oversight, labor cost savings, whilst maintaining all premium Sweet Elena quality attributes: exceptional sweetness, golden flesh and established market recognition across key export destinations.

GOLDEN FORESTS COMPETITIVE ADVANTAGES

Golden Forests' mango program combines proprietary genetics, scientific partnerships and advanced plantation technology to deliver professional management and transparency for client-owned trees.

1. Exclusive Sweet Elena Variety

Proprietary PRMSU-developed cultivar exclusively to Golden Forests. High-density cultivation (416 trees/hectare) enables efficient plantation management, streamlined operations and superior pest control protocols. Year-round production capability captures off-season premium pricing. Premium Sweet Elena quality is maintained across all fruit characteristics.

2. Prime Zambales Location

Operations established in Zambales, the Philippines' premier Carabao and Sweet Elena mango-growing region, renowned for optimal climate, soil conditions and established agricultural expertise. Proven growing conditions ensure consistent fruit quality and reliable production outcomes for client trees. The Installation of drip irrigation ensures the correct volume of water supply to the trees and application of liquid fertilizers (Fertigation) to be applied. Furthermore, climatic risks associated with longer dry seasons are mitigated.

3. Scientific Research Partnerships

Collaborative relationships with President Ramon Magsaysay State University (PRMSU) provide access to cutting-edge mango research, grafting techniques, dwarf variety development and disease prevention protocols. PRMSU operates the Regional Mango Centre, focused on production advancements benefiting all Golden Forests cultivations. Strategic relationships with the University of the Philippines Los Banos (UPLB) provide Golden Forests with the latest post-harvesting technologies to improve upon and meet all quality standards for export.

4. AI-Enabled Plantation Intelligence

Proprietary agroforestry management platform integrating agricultural drones for surveillance and spraying of foliar fertilizers, pesticides and fungicides, satellite geotagging, environmental monitoring (soil, temperature, rainfall) and predictive analytics. Advanced technology optimizes tree health management, early pest detection and precise irrigation scheduling, ensuring superior care for every client-owned tree.

5. GPS-Verified Inventory and Reporting

Fund-Managed inventory is documented with precise GPS coordinates. Annual independent audits verify inventory counts. Complete transparency and institutional-grade reporting for all clients.

6. Measurable Sustainability Impact

1:1 native species reforestation program. One Philippine endemic tree (Narra, Agoho, Mangono, Molave, Talisay, or Belite) is planted for every commercial mango tree purchased. Clients contribute directly to native forest restoration, carbon sequestration, and biodiversity enhancement whilst building their mango investment.

HOW THE INVESTMENT WORKS

INVESTMENT AT A GLANCE

Share Subscription Structure

The minimum subscription for corporate investors is **USD \$100,000 of shares**, subject to the definitive subscription documents.

Investors subscribe for shares in a Singapore Variable Capital Company (VCC) fund with the mango assets held in a designated Sub Fund. The share subscription price is structured to correspond to one mango tree (a “tree-equivalent share”): **USD \$437.08** per share. A deduction of **USD \$2.69** and **USD \$0.39 per kg** is applied to mango harvest proceeds per share from years 5-25 to offset audit reporting and packaging, logistics cold storage and export certification. From years 10-25 a deduction of **USD \$28.65** is applied to mango harvest proceeds per share to offset future harvesting and maintenance costs.

Investors do not directly own individual trees. Instead, they hold shares in a pooled fund that administers and manages the tree inventory. Trees managed by the fund will be recorded with GPS coordinates, inventory reference numbers and, where applicable, supported photographs, providing evidence of the trees corresponding to the shares subscribed to in VCC Sub Fund.

Share Pricing Structure

The share price is based on the initial investment of USD \$437.08 per tree and annual deductions from harvesting proceeds form year 5 onwards, and is based on the following Use of Proceeds

Year 0 Use of Proceeds Category	Per Tree (USD)	Illustrative Purpose
Plantable seedling	40.00	Nursery propagation and grafting.
Establishment and maintenance	201.50	Land lease (25 years), planting, and early maintenance allocation years 1-9.
Capital expenditure	24.50	Irrigation, fencing, security, and land preparation.
Plantation Service fee	39.90	Illustrative plantation service support allocation
Management, payroll, and overhead	89.00	Illustrative management, payroll, and overhead allocation.
Annual audit	2.69	Illustrative field inventory, yield assessment, export compliance and reporting years 1-4
Subscription placement fee	8.17	Commissions paid to private placement agents/advisors for subscriptions secured from their client base.
Total Year 0 mango use of proceeds per tree	437.06	Illustrative Year 0 investor subscription allocation per mango tree-equivalent share.

Recurring Annual Mango Operating Deduction Cost Breakdown

Recurring Annual Use of Proceeds Category	Per Tree (USD)	Illustrative Purpose
Maintenance and harvesting	28.65	Illustrative annual maintenance and harvesting support from Year 10 to 25.
Annual Audit	2.69	Illustrative field inventory, yield assessment, export compliance and reporting years 5-25
Recurring Annual Use of Proceeds Category	Per Kilo (USD)	Illustrative Purpose
Packaging, storage and logistics	0.39	Packaging, sorting, cold storage, certification, sanitary protocols, local logistics, export compliance

CORE INVESTMENT METRICS AND INCOME - MANGO

The table below summarizes the income mechanics for an illustrative **229-tree** mango allocation, using the stated yield and pricing assumptions. Any income (if any) depends on realized yields, product quality, market pricing, costs, fees, taxes, and successful harvesting and sales to third-party buyers. Nothing in this table should be read as a guarantee of income.

Year	Investor Trees	Mango Yield Profile	Investor Capital	Investor Gross Cash	Operator Share (20%)	Investor Net Cash	Investor Net Position
1	229	0 kg	\$100,000	\$0	\$0	\$0	(\$100,000)
2	229	0 kg	\$0	\$0	\$0	\$0	(\$100,000)
3	229	0 kg	\$0	\$0	\$0	\$0	(\$100,000)
4	229	0 kg	\$0	\$0	\$0	\$0	(\$100,000)
5	229	30 kg/tree	\$0	\$31,602	\$6,320	\$22,603	(\$77,397)
6	229	45 kg/tree	\$0	\$48,797	\$9,759	\$34,819	(\$42,578)
7	229	50 kg/tree	\$0	\$55,769	\$11,154	\$39,534	(\$3,044)
8	229	65 kg/tree	\$0	\$74,681	\$14,936	\$53,322	\$50,278
9	229	80 kg/tree	\$0	\$94,987	\$18,997	\$68,845	\$119,123
10	229	100 kg/tree	\$0	\$119,981	\$23,996	\$80,651	\$199,774
Years 11-15	229	100 kg/tree per year	\$0	\$694,331	\$138,866	\$505,820	\$705,594
Years 16-25	229	100 kg/tree per year	\$0	\$1,524,935	\$304,987	\$991,677	\$1,697,271

Calculation inputs: USD 100,000 initial investment / USD 437.08 per mango tree = 229 investor trees. Operator share remains 20% of gross harvest proceeds before deductions. Investor net cash is then reduced by annual audit reporting of USD 2.69 per tree from Years 5-25, logistics/packaging/cold storage/export certification of USD 0.39 per kg harvested from Years 5-25 and harvesting and maintenance of USD 26.65 per tree per annum from Years 10-25.

Price escalation: The table assumes a Year 5 selling price of \$4.60/kg, escalating at 3.0% per annum from Year 6 onward.

Illustrative Calculation Inputs (Mango)	
Tree-equivalent shares	229
Initial cost of shares	USD 100,000
Harvest Deductions from year 5-25	USD 26.65 (year 5-25) = \$97,645 USD 2.69 (year 1—25) = \$12,936 USD 0.39 k/g (year 5-25) = \$167,009
Harvest schedule	Commencing Year 5 through to year 25
Yield assumption (mango fruits)	30kg in year 5 and scaling to an average of 100kg by year 10
Commission (Company)	20% of gross sales price of mango fruits
Price assumption	USD 4.60 kg in year 5 and escalating by 3% per annum (current price of 4.00 kg +3% price escalation over 25 years)
Derived product volume (per harvest year)	Years 5- 9 = 61,830 kg (270 kg accumulative x 229 trees) Year 10-25 = 22,900 kg annually (100 kg x 229 trees)
20% Commission	USD 529, 015
Derived net income value (per harvest year) less 20% commission and harvest deductions	Year 5-9 = USD 219,123 Year 10-25 = USD ,1578,148
Total net harvest proceeds (Years 5-25) inclusive of sales price escalation from year 5 (3% p/a), less initial investment	USD 1,697,271 (14.9% Annualized IRR at year 15)

Professional Lifecycle Management

Golden Forests provides comprehensive turnkey plantation management:

Years 1-4: Establishment and Development

Professional planting with optimal spacing and orientation. Integrated pest and disease management. Fertilization programs optimize Zambales soil conditions. Irrigation and water management. Pruning and canopy management. Tree maturation and initial flowering. 20% mortality buffer with replacement trees vested at no additional cost.

Years 5-10: Growing Production Phase

Commercial fruit production commences in year 5 with initial yields of approximately 30 kg per tree. Flowering induction for year-round production capability. Harvest coordination and quality grading. Production increases incrementally toward stable yields. Market relationships established with export buyers and domestic premium outlets. Income from each harvest has been projected from only 80% of the trees planted, to create a 20% buffer for non-fruiting trees.

Years 11-25: Peak and Sustained Production

Stable annual yields of 100 kg per tree from year 10 onwards. Consistent annual harvests coordinated with international and domestic buyers. Year-round production scheduling captures off-season premium pricing opportunities. Quality control and grade optimization are maintained throughout the productive lifecycle. Induced flowering techniques are designed to provide for harvesting throughout the year.

Transparent Fee Structure

Golden Forests commission: 20% of gross fruit sales

No additional annual management fees. No hidden charges.

The commission structure directly aligns Company incentives with client outcomes. Golden Forests earn revenue only when clients' trees produce fruit and generate sales proceeds.

Net proceeds distributed to tree owners following each harvest. Annual reporting documents production volumes, sales pricing and financial distributions.

Source: Golden Forests Business Plan, Operations & Revenue Model.

Return Sensitivity and Potential Upside¹

Conservative mid-range pricing assumptions (USD 3.60-4.81/kg blended average) provide margin for variability whilst targeting realistic outcomes.

Potential upside scenarios:

- Premium export-grade fruit (USD 6-8/kg): Higher cash distributions over the life of the trees
- Optimal production volumes (150+ kg/tree): Higher cash distributions driven by increased harvest volumes
- Off-season premium pricing (+50-100%): Enhanced return potential
- Year-round harvest scheduling: Maximized premium capture

Returns are not guaranteed. Actual outcomes vary according to fruit quality grades, market conditions, production volumes and harvest timing.

AI-ENABLED PLANTATION INTELLIGENCE

AERIAL SURVEILLANCE

GIS DATA MAPPING

PRECISION FIELD SENSORS

DATA ANALYTICS PLATFORM

Advanced Technology Integration

Golden Forests operates a proprietary Agroforestry Intelligence management platform integrating real-time environmental monitoring, predictive analytics and precision agriculture techniques.

Environmental Monitoring

Soil moisture sensors, temperature and rainfall tracking, microclimate analysis supporting optimised growing conditions.

Drone-Based Crop Management and Health Surveillance

Efficient application of foliar fertilization and distribution of pest and disease applications. Regular aerial canopy analysis, early pest and disease detection systems, precision mapping and documentation.

Precision Input Application

Data-driven fertilization schedules, targeted irrigation protocols and integrated pest management.

Satellite-Based Geotagging and Yield Estimation

GPS verification systems, biomass modelling and harvest forecasting, performance tracking dashboards.

Operational Excellence Through Technology

Technology enhances productivity, reduces input waste, improves risk management, and supports transparent data-driven decision-making across all plantation activities

AI-ENABLED PLANTATION INTELLIGENCE

80+ Years Combined Management Experience

Golden Forests' leadership brings extensive expertise across plantation establishment, tropical horticulture, agroforestry systems, and international commodity markets.

Scientific Advisory Leadership

Golden Forests' scientific operations are directed by seasoned agricultural professionals who bring rigorous academic credentials and decades of practical field experience:

R.A.G Ferdinand Domingo, Agri-Science Director

Associate Professor and Director of PRMSU-Mango Research and Development Centre with over 40 years of experience in mango cultivation. Introduced Dwarf Mango Technology to the Philippines and developed integrated pest management protocols. Holds a master's degree in Agricultural Technology Education (Central Luzon State University).

Leading Philippine Research Partnerships

Collaborative relationships with premier agricultural research institutions provide access to cutting-edge research, technical expertise and continuous operational improvement.

President Ramon Magsaysay State University (PRMSU)

- Mango cultivation research, grafting methodology, dwarf variety development (Dwarf Sweet Elena Carabao hybrid), disease prevention protocols, and productivity enhancement. PRMSU operates the Regional Mango Research and Development Center focused on scientific analysis, field trials and production advancements for Philippine mango cultivation.

Visayas State University (VSU)

- Agricultural systems optimization, soil science analysis, integrated pest management protocols and crop health monitoring.

University of the Philippines Los Baños (UPLB)

- Elite mango variety development, genetic research, advanced horticultural systems and conservation genetics.

Scientific Validation and Credibility

University partnerships provide third-party scientific validation, support continuous operational improvement and enhance institutional credibility with sophisticated investors.

Research collaboration ensures Golden Forests incorporates the latest findings, maintains best-practice standards and delivers consistent quality outcomes across all plantation activities.

1:1 Native Species Reforestation Program

For every commercial mango tree sold to clients, Golden Forests plants one Philippine endemic tree species.

Native species selections include Narra (*Pterocarpus indicus*), Agoho (*Casuarina equisetifolia*), Mangono (*Diplodiscus paniculatus*), Molave (*Vitex parviflora*), and Talisay (*Terminalia catappa*).

SCALE OF IMPACT (PER 1,000 MANGO TREES SOLD)

The Program for the Endorsement of Forest Certification (PEFC) Golden Forests is actively pursuing PEFC certification, the internationally recognized standard for responsible forest management, validating:

- Environmental responsibility (biodiversity, water resources, soil quality protection)
- Social responsibility (fair labor practices, community consultation)
- Economic viability (sustainable long-term business operation)

PEFC certification provides independent third-party verification of sustainability claims, supports premium market access and meets institutional investor ESG due diligence requirements.

FUTURE

COMPREHENSIVE RISK MANAGEMENT

Five-Layer Protection Framework

1. Mortality Buffer and Replacement Guarantee

Golden Forests maintains 20% surplus planting beyond the client-owned tree inventory. If mortalities occur, buffer trees are vested to affected clients at no additional cost, maintaining target portfolio sizes.

2. Fruiting Buffer

Golden Forests projects only 80% of the planted trees fruiting on an annual basis. This is a conservative approach and clients receive all the income derived from the mango fruits harvested each year.

3. Comprehensive Insurance Coverage

Plantation operations maintain insurance protection against typhoon damage, flooding, fire, pest or disease outbreaks, theft, vandalism and third-party liability. Policies are placed with the Philippine Crop Insurance Corporation (PCIC)

4. Regulatory Compliance and Certification

Full compliance with the Philippine Department of Agriculture export standards, phytosanitary certification requirements and DENR licensing frameworks. Pursuing PhilGAP (Philippine Good Agricultural Practices) and The Program for the Endorsement of Forest Certification (PEFC certification, validating responsible agricultural management. Established relationships with regulatory authorities ensure smooth export processes.

5. Professional Management and Scientific Oversight

Our leadership team brings more than 80 years of combined management experience, supported by scientific advisory from leading Philippine universities, including PRMSU, VSU, and UPLB. Annual independent audits verify fund-managed trees and baseline KPI reporting.

COMBINED PORTFOLIO BENEFITS

Investors may combine agarwood and Sweet Elena mango tree ownership within unified, diversified agroforestry portfolios. Combined portfolios deliver superior risk-adjusted returns through:

Harvest Timeline Diversification

Mango produces annual cash flows (years 5-25) whilst agarwood delivers concentrated returns (years 9-10)

Market Risk Mitigation

Exposure to distinct commodity markets (luxury oud vs. premium fruit) reduces single-market concentration

GOLDEN FORESTS

IMPORTANT NOTICES & DISCLAIMERS

Forward-Looking Statements

This Exposé contains forward-looking statements regarding projected cash distributions, market conditions, and operational outcomes. Actual results may differ in a way. Projections are estimates based on conservative assumptions and historical market data. Past performance does not guarantee future results. Investors may lose part or all of the capital invested.

Risk Factors

Agricultural investments carry biological risks (tree mortality, pest outbreaks, yield variability), market risks (pricing fluctuations, demand shifts), operational risks (management performance, harvest execution), regulatory risks (policy changes, export restrictions), and liquidity risks (no secondary market, 25-year holding period). Comprehensive risk discussion available in Golden Forests Business Plan.

Not an Offer to Sell Securities

This document describes an opportunity to purchase agricultural assets (mango trees) with professional management services. It does not constitute an offer to sell securities, investment contracts, or financial instruments subject to securities regulation in any jurisdiction. Tree ownership represents direct ownership of biological assets, not securities or shares.

Qualified Investors Only

This opportunity is available exclusively to accredited investors, qualified purchasers, or high-net-worth individuals meeting applicable regulatory thresholds. Minimum investment: USD 100,000. Investors must demonstrate financial capacity to sustain a long-term, illiquid investment and complete any required suitability and onboarding assessments.

Independent Professional Advice Required

Information provided is for educational and informational purposes only. It does not constitute investment advice, financial planning guidance, or suitability determinations. Prospective investors must engage independent professional advisors (financial planners, legal counsel, tax specialists, agricultural consultants) to evaluate appropriateness for their specific circumstances.

Confidential Information

This Exposé contains confidential business information and proprietary methodologies. Recipients agree to maintain confidentiality and refrain from unauthorized disclosure or distribution.
