CLIENT INVESTMENT PRESENTATION

July 2026

A photograph of a mango orchard at sunset. The scene is filled with lush green trees and numerous ripe, yellow mangoes hanging from the branches. In the lower right, three workers wearing green long-sleeved shirts and wide-brimmed straw hats are seen from behind, looking towards the trees. The warm, golden light of the setting sun creates a soft glow and lens flare effects across the image.

Key Investment Features

Key Investment Features

Minimum investment of \$100,000, open to professional investors

Agarwood — \$301.71 / share

- *\$173.10 held in reserve by a VCC-licensed fund manager for future production costs (years 7-10)*

Mango — \$437.08 / share

Deducted from gross fruit-harvest income:

- *Annual audit reporting- \$2.69 (years 5-25)*
- *Maintenance & harvesting \$28.65 (years 10-25)*
- *Packaging/post harvest-\$0.69/kg years 5-25)*

Who We Are

Who We Are

Agroforestry investment and plantation management group specializing in premium, high-value tree crops.

MAS-licensed fund, Singapore — corporate governance for shareholders.

Abu Dhabi office — advisory and support for our Private Placement Intermediaries.

Private Placement Intermediaries — present our Private Placement Memorandum across five international jurisdictions to professional clients subscribing to mango and agarwood shares.

*Agroforestry:
a strategic asset class*

Agroforestry: a strategic asset class

- a. Tangible biological assets with intrinsic value
- b. Long-term global demand for mango fruit and fragrance products
- c. Lower correlation to traditional financial markets
- d. Combines sustainability and reforestation with income generation
- e. Certified carbon offsets — 1.16 million tonnes of CO₂ sequestered over 25 years, a verifiable ESG footprint offset

Agarwood and Mango Strategy

Different Maturity timelines diverse income flow together, they balance income and growth

Agarwood: Luxury Commodity

Long-cycle, high-value asset with premium end markets.

Mango: Recurring Annual Income

Short-cycle, annual fruit harvests generate steady, repeatable income.

What is Agarwood

Resinous heartwood from *Aquilaria crassna* formed as a natural defense.

Luxury Applications

Coveted in fine fragrances, incense, oils, and wellness rituals.

Exceptional Value

Among the most valuable natural commodities globally.

Demand Hotspots

Strongest in the Middle East, Asia, and Europe.

Global Demand and Pricing

\$40B+Global Agarwood Market Value, projected to reach \$85 billion (2034)

- **Sustained global demand** driven by luxury fragrances, incense, oils, and wellness applications.
- **Primary demand centers** in the Middle East, Asia, and Europe, where agarwood is culturally and commercially entrenched.
- **Structurally constrained supply** due to CITES regulation limiting legal wild harvesting.
- **Premium pricing for certified, plantation-grown agarwood**, with buyers favoring traceable and sustainable sources.

A photograph of three workers in a forest, wearing green shirts and traditional conical hats, tending to trees. The ground is covered in dry leaves, and a green bucket is visible. In the background, a body of water and distant mountains are visible under a cloudy sky. The text "Agarwood Plantation Model" is overlaid in a white, elegant script font.

Agarwood Plantation Model

Agarwood Plantation Model

Managed 10 Years

Trees are professionally planted and cared for across a decade-long cycle.

Inoculate Years 7–8

Controlled inoculation induces resin formation at maturity.

Harvest Years 9–10

Yield realization occurs over two harvest seasons.

Conservative Yields

Projections use conservative assumptions to mitigate risk.

Agarwood Client Income

Minimum Investment \$100,000-331 trees

\$100,000

Capital invested

331 agarwood trees

\$416,336

Net income over 10 years

After \$100,000 cost & 10% commission

17.8%

Annualised IRR

10-year hold · 5.16× capital

Agarwood sold at USD 984.25/kg (inclusive of 3% annual escalation) · Average yield 1.75 kg per tree, realized across years 9 and 10
Net income shown after deducting the \$100,000 capital cost and 10% management commission · Income linked to actual export sales

No Additional Capital Required

ONE RESERVE FUND COVERS EVERY STAGE — PRE-FUNDED FROM YOUR TREE PRICE

\$0

Additional capital required
No future capital calls

\$173.10

Reserve held per tree
Built into the tree price · +3% escalation p.a.

\$57,296

Total reserve fund
Held by the Fund Manager

Reserve of \$173.10 per tree (with 3% annual escalation) is collected within the tree purchase price and held by the Fund Manager, eliminating future capital calls.

Sweet Elena Mango Overview

Variety

Premium Philippine mango,
consumed fresh and sold annually.

Exceptional Sweetness

Internationally recognized for
outstanding sweetness and quality.

Global Demand

Strong demand in Japan, the US,
the Middle East, and across Asia.

A photograph of a bustling market stall. In the foreground, a woven wicker basket filled with ripe, yellow-orange mangoes sits on a wooden table. One mango is sliced open, revealing its juicy, orange-colored flesh. The basket is lined with a light-colored cloth. In the background, the market stall is filled with various fresh produce, including more mangoes, tomatoes, and other fruits, displayed on wooden shelves and crates. Several people are visible in the background, some standing and others moving through the stall. The lighting is warm and natural, suggesting an indoor or covered market setting. The overall atmosphere is lively and fresh.

Mango Market Opportunity

Mango Market Opportunity

Global Demand Surging

Market size exceeds USD 55B and continues to expand worldwide.

Premium Price Leadership

Philippine Sweet Elena mango commands a consistent global premium.

Quality Drives Exports

Buyers value sweetness, texture, and reliable consistency.

Year-Round Consumption

Steady off-season demand supports export growth. Strong domestic market.

Mango Plantation Model

- Fruiting begins in year 5
- Annual harvests up to 25 years
- Induced flowering enables year-round production
- Dwarf techniques allows for high-density planting, improving maintenance and land efficiency

Mango Client Income

Minimum Investment \$100,000-229 trees

\$100,000 IN 229 MANGO TREES → \$1.7M NET INCOME OVER 25 YEARS

Net proceeds after harvest deductions and 20% management commission; Years 5–15 also net of the \$100,000 capital. IRR annualised on a capital-multiple basis.

Mango fruit sold at USD 4.60/kg (escalating 3% p.a.); yield ramps from 30 kg/tree (Year 5) to 100 kg/tree (Years 10–25). Income linked to actual fruit sales.

No Further Capital Required

ONGOING COSTS ARE DEDUCTED FROM GROSS HARVEST INCOME — NEVER A CAPITAL CALL

\$2.69

Audit & reporting

Per tree, each year · Years 5-25

\$26.85

Harvesting & maintenance

Per tree, each year · Years 10-25

\$0.39/kg

Export handling & certification

Packaging, cold storage & QC · Years 5-25

All costs are deducted from gross harvest income — never billed as a capital call. The \$0.39/kg export charge covers packaging, cold storage, quality-control inspections and export certification.

Combined Portfolio Income

Minimum Investment \$100,000 · 297 shares

\$100,000 IN 220 AGARWOOD + 77 MANGO SHARES → \$847,574 NET OVER 25 YEARS

Share mix matches 2026 inventory (23,000 agarwood : 8,000 mango): 220 agarwood + 77 mango shares (≈\$100,000). Agarwood completes its 10-year cycle within the first 15 years; mango pays annually through Year 25.

Net of all harvest deductions and management commission (agarwood 10%, mango 20%); the first 15 years are also net of the \$100,000 capital. IRR annualised on a capital-multiple basis.

Investment Return Summary

Projected cumulative net income | Based on current market prices | Net of management commission

AGARWOOD SUB FUND

\$416,336

Net income over 10 years
331 trees · \$301.71 per share

17.8% annualised IRR

5.16x on capital invested

MANGO SUB FUND

\$1,697,271

Net income over 25 years
229 trees · \$437.08 per share

12.3% annualised IRR

17.97x on capital invested

COMBINED PORTFOLIO

\$514,061

Net income over 15 years
220 agarwood + 77 mango shares

12.9% annualised IRR

6.14x on capital invested

Combined Portfolio — Net income over 25 years: \$847,574 | 220 agarwood + 77 mango shares | 9.4% annualised IRR | 9.48x on capital invested

Agarwood Sub-Fund

Harvest in years 9–10 · USD 984.25/kg · Yield 1.75 kg · 10% management commission

Mango Sub-Fund

Annual harvest from year 5 · USD 4.60/kg (accumulating 3% per annum) · Yield 30–100 kg (years 5–9), 100 kg (years 10–25) · 20% management commission

Combined

Mango provides early-stage income from year 5; agarwood delivers high-value returns in years 9–10

Long-term

Mango continues producing steady annual income through year 25 and beyond

Projected net income based on current market prices. Minimum investment: \$100,000 (professional investors only). Income linked to actual export sales.

Ownership Structure

Your Sub-Fund Share Investment

- Clients hold shares in a Singapore regulated Sub Fund
- Each share equals the equivalent value of one agarwood or mango tree
- Separate Sub Funds per tree type (Agarwood / Mango)
- Shares are transferable and inheritable
- Minimum investment: \$100,000 (professional investors only)

Plantation Management

Professional Operations

Experienced plantation and nursery teams delivering full lifecycle management.

Maintenance, harvesting, processing, and export managed end-to-end.

Client Involvement

No operational involvement required from clients.

Technology Advantage

Agroforestry Intelligence

Integrated insights across crops, soil, and microclimates to guide decisions.

AI-enabled Monitoring

Real-time anomaly detection and predictive alerts for field operations.

Smart Irrigation & Sensors

Soil moisture, nutrients, and flow control optimize water and inputs.

Drones & Yield Optimization

Aerial health mapping informs targeted actions to maximize output.

Risk Mitigation

How Risks Are Managed

- **20%** surplus trees planted as mortality buffer
- Mango fruit yields projected from only **80%** of the mango trees planted
- **100%** tree replacement guarantee for covered events
- Conservative yield and pricing assumptions
- Diversification across two crop types

A group of people are engaged in a tree-planting activity on a grassy hillside. In the foreground, a man in a blue shirt and a woman in a green shirt are crouching, working with a small tree sapling. They are wearing gloves and using tools. In the background, other people are also planting trees. The landscape is a vast, green valley with rolling hills and mountains under a clear sky. The text "Sustainability and Impact" is overlaid in a large, white, cursive font.

Sustainability and Impact

Environment and Social Economic Benefits

- 1.1M trees planted over 15 years
- One native tree for every mango and agarwood tree planted
- Lahar-damaged land restored to productive cover
- ~1.59M paid workdays; ~1,291 jobs by year 10
- 80% of roles for women; Aeta family livelihoods
- MRV-verified carbon and biodiversity gains

Climatic Change Impact Over 25 years

- **1.16M tonnes CO₂** — sequestered over 25 years (2026–2050)
- **\$28.4M carbon credits** — gross revenue; ~\$27.6–27.9M net after certification
- **Native trees lead** — 49% of capture, mango 33%, agarwood 18%
- **3.1M trees standing** — peak living stock by 2040 driving sequestration
- **\$15/tonne base price** — UAE voluntary market, 3% annual escalation
- **IPCC-based MRV** — verified under Verra VCS, Gold Standard, Plan Vivo

Transparency & Reporting

Client Visibility

Annual independent plantation reports provide objective performance insights.

Secure Investor Access

Dedicated portal access to real-time dashboards and documentation.

Verified Tree Inventory

GPS confirms the location of all fund-managed trees.

Optional Site Visits

Join our plantation visit programme for first-hand access.

Why Golden Forests

Regulatory Approvals

Golden Forests is a first mover with regulatory approvals for *Aquilaria crassna* agarwood in the Philippines, ensuring compliance and market access.

Exclusive Technology

Licensing of exclusive inoculation technology sets Golden Forests apart in agarwood production.

Agroforestry Expertise

Proven expertise in agroforestry guarantees sustainable and productive plantation management.

Scalable Model

A disciplined, scalable plantation model enables growth and consistent income.

Next Steps

Next Steps

- a.** Select Agarwood Sub fund, Mango Sub fund, or invest in both
- b.** Choose number of shares
- c.** Execute subscription and shareholders agreement
- d.** Begin earning income from product sales via managed plantations
