Mangoes, Agarwood, and Golden Forests

What's the global demand for mangoes?

Mangoes are one of the **most consumed fruits in the world**, with roughly **45 million tonnes** eaten annually, five times more than strawberries. Global demand for premium mangoes continues to rise, particularly in countries where mango cultivation is limited.

Export markets are still developing, and availability has been restricted, which means international trade offers significant growth potential.

What's the global demand for Agarwood and Oud oil and Agarwood chips ?

Agarwood, derived from the *Aquilaria Crassna* tree, is the **most valuable wood in the world**. **Agarwood chips** are used for burning incense, traditional medicine and the **perfumery and cosmetic industry**. When the wood is distilled, it produces **Oud oil**, used in the **world's most expensive perfumes**, used by brands like **Tom Ford, Chanel, Givenchy, and Creed**.

Over **1,000 new fragrances** featuring Oud are launched every year. The global perfume industry is now valued at **USD 33 billion** and continues to expand rapidly.

Who is golden forests Agroforestry Intelligence?

Golden Forests (www.goldenforests.ai) a new-generation agroforestry company combining **scientific expertise, AI technology**, and sustainable plantation management.

We specialise in **Agarwood** and **Mango**, creating enduring value for **professional/corporate investors** and local communities by transforming tree plantations into internationally recognised assets that promote economic growth and biodiversity.

What's golden forests vision?

To pioneer the future of sustainable agroforestry by becoming the **leading provider of premium Aquilaria Crassna** (agarwood), **mango**, in the **Philippines**, contributing to **local economic development**, biodiversity conservation, and **global environmental resilience**.

Mission, Values, and Objectives

What is Golden Forests Mission Statement?

We aim to create **enduring value** for both **professional/corporate investors** and **local communities** by transforming **Asian tree plantations** into **internationally recognised assets** that deliver **economic prosperity** and **environmental sustainability**.

Our mission is to establish a **thriving and ethical agroforestry enterprise** that harnesses the unique potential of **agarwood** and **mango cultivation**. We are committed to **empowering local communities**, advancing **sustainable practices**, producing **world-class products**, and supporting **climate change mitigation**, resilience and adaptation.

What are Golden Forests Core Values?

At **Golden Forests**, our work is guided by a firm set of values that shape every decision and action we take:

Integrity: We uphold honesty, transparency, and accountability in all aspects of our operations.

Professionalism: We strive for excellence, maintaining the highest standards in service, management and product quality.

Sustainable and Ethical: We are dedicated to responsible and sustainable cultivation of agarwood, mango, and durian, ensuring ethical sourcing and full compliance with international standards.

Quality: We employ rigorous propagation and cultivation methods to produce consistently premium-quality products that meet the expectations of discerning global clients.

Investment Opportunity: Golden Forests offers a unique opportunity for professional/corporate investors seeking participation in a future-focused and environmentally sustainable agroforestry venture.

Community Empowerment: We prioritise local engagement, creating employment, building skills, and supporting social initiatives that enhance livelihoods and long-term community wellbeing.

What are Golden Forests Key Objectives?

Deliver long-term value for **professional/corporate investors** by combining **advanced agroforestry science** with **AI-driven plantation management**.
with **state-of-the-art AI-driven plantation management**.

- Ensure **full regulatory compliance** and **licensing** in the **UAE** and **Asian partner countries**, setting a new benchmark for **transparent and ethical cross-border agricultural investment**.

Expand our **professional/corporate investor network** and regional presence through **strategic partnerships** with like-minded institutions and stakeholders.
like-minded institutions and stakeholders.

- Establish **industry-leading standards** in **sustainable plantation management** and **responsible economic development**.

Lead with **best-in-class governance** and **reporting**, fostering **trust, clarity and enduring relationships** with our **professional/corporate investors** and partners.

Sustainability and Ethical Practices

What is Golden Forests Commitment to Sustainability?

Sustainability is central to our business. We want to combine **economic growth** with **environmental protection** and **social responsibility** through:

- **Permaculture Principles** – Designing plantations to mimic natural ecosystems for resilience and biodiversity.
 - **Biodiversity & Agroforestry** – Integrating trees with plants and wildlife habitats to sustain healthy ecosystems.
 - **Sustainable Cultivation** – Avoiding synthetic chemicals, focusing on natural soil enrichment and pest control.
 - **Soil & Water Stewardship** – Using composting, and efficient irrigation to conserve natural resources.
 - **Responsible Waste Management** – Reducing, reusing, and recycling all organic material to support soil health.
-

What are Golden Forests Ethical Practices?

We operate under a strict ethical code based on **fairness, respect, and transparency**.

- **Fair Treatment of Workers** – We will ensure safe working conditions, fair pay, and equal opportunities.
 - **Environmental Responsibility** – We will minimise our ecological footprint through sustainable resource use.
 - **Commitment to Industry Standards** – We are committed to meeting and exceeding recognised certifications and sustainability frameworks.
 - **Staff Development** – We plan to invest in continuous training and career progression for all employees.
-

What are the working conditions like at Golden Forests?

We will operate in accordance with the UN Global Compact principles for **fair working conditions, ethical pay, and safe workplaces**.

All staff will be employed under local labour laws, provided with fair wages, benefits, and safe conditions, reinforcing our commitment to social responsibility and transparency.

What are golden forests Research and Innovation Goals?

We aim to invest in **ongoing research** to refine Agarwood cultivation and Agarwood chips extraction methods. Our aim is to improve productivity, reduce environmental impact, and strengthen the long-term **economic viability** of sustainable agroforestry.

Values, Leadership, and Financial Strength

What are Golden Forests Values?

Our guiding principles shape every decision we make:

- **Integrity and transparency** in management and reporting
 - **Commitment to sustainability** and environmental care
 - **Focus on quality** across all product lines
 - **Empowerment of local communities** through fair employment
 - **Dedication to innovation** in agroforestry and technology
-

What Drives Golden Forests Success?

- A **strong management team** with deep industry expertise
 - Ongoing **commitment to ethical and sustainable practices**
 - Strong **relationships with local communities**
 - Proven **market access** through global partnerships
-

What Drives Golden Forests Success?

Golden Forests is **debt-free and fully self-funded**.

We own our plantations outright, giving us total control and stability. A **replacement-tree buffer stock** ensures every client's investment is protected.

The company benefits from the strategic support of a **former Chief Investment Officer** of one of the world's top five investment firms, a key angel investor who reinforces confidence in our financial management and growth strategy.

Ownership, Operations, and Advantages

Who owns the trees and what do I own as a shareholder?

Professional/corporate investors do not purchase or directly own individual trees. Instead, eligible professional/corporate investors subscribe for **shares in one or both dedicated funds managed by a Variable Capital Company**: one fund that holds the mango tree assets and one fund that holds the agarwood tree assets. Each share is intended to economically correspond to the value of one mango tree or one agarwood tree (as applicable). The Fund is the legal owner of the underlying plantation assets, and professional/corporate investors participate as shareholders in the relevant Funds. **Licensed Private Placement Intermediaries** provide Professional Investors with the opportunity to subscribe to shares, which is detailed through a Private Placement Memorandum.

Professional/corporate investor rights and the governance of each Fund are set out in the **Subscription Agreement** and **Shareholders' Agreement** for the relevant Fund, together with any constitutional documents and applicable law. These documents explain, among other things, how management and operational decisions are made, how shareholders are represented, and what protections apply to shareholder interests.

What happens if Golden Forests were ever to cease operations?

Your shareholding in the relevant fund would remain in place, subject to the fund's governing documents and applicable law.

If Golden Forests ceased operations, any response would be handled under the relevant fund's governance arrangements, Shareholders' Agreement and applicable law. This may include seeking shareholder approval for a replacement operator or other permitted action to protect shareholder interests.

What makes Golden Forests different from its competitors?

Our success stems from two years of detailed research and strategic development, combining:

- **University-level agricultural expertise**
- **AI-driven plantation management**
- **Commitment to sustainability**

This integrated approach positions Golden Forests at the **forefront of sustainable, real-asset investment** in Asia.

Do you offer an eco-tourism programme for professional/corporate investors?

Yes. Professional/corporate investors are warmly invited to visit the plantations and, where applicable, see the assets held by the relevant fund(s). We will provide an **eco-tourism experience** that includes a **stay at a luxury hotel**, guided plantation tours, and opportunities to meet the local team.

This will give professional/corporate investors a chance to experience their investment first-hand, combining education, community impact, and leisure.

Technology, Fees, and Operations

The “AI” stands for Agroforestry Intelligence, our proprietary use of artificial intelligence to manage plantations more efficiently.

We will use AI-powered systems for:

- **Crop monitoring and yield prediction**
 - **Pest and disease detection**
 - **Irrigation and fertilisation optimisation using AI and solar-powered pumps**
 - **Precision agriculture** that maximises resource efficiency and sustainability
-

What fees does Golden Forests charge?

We charge a harvest management fee based on your crop type:

- **10 %** of Agarwood harvest proceeds
- **20 %** of Mango harvest proceeds

This model helps align interests: the higher the sales price achieved for harvest proceeds, the better for both the professional/corporate investor and golden forests.

If the investment is so profitable, why does the company offer fund shares?

Unlike many companies that raise capital by selling shares at the operating company level or taking on debt, Golden Forests chooses to stay **private and debt-free**.

By offering eligible professional/corporate investors the opportunity to subscribe for shares in the relevant funds(s), we:

- Comply with Regulations required for promoting investments to professional clients
 - Avoid external borrowing
 - Maintain full ownership and control
- Allow professional/corporate investors to participate in the outcomes of sustainable plantations through Fund shareholdings

This model helps align interests: the higher the sales price achieved for harvest proceeds, the better for both the professional/corporate investor and golden forests.

How does Golden Forests ensure water supply for plantations?

All plantations will be fitted with **irrigation and drainage systems** connected to **solar-powered wells and pumps**, ensuring a consistent and sustainable water supply year-round.

Sustainability, Insurance, and Security

Are the trees grown sustainable?

Golden Forests follows strict **environmental and ecological guidelines**.

We avoid herbicides such as **glyphosate**, using natural and sustainable alternatives wherever possible.

In exceptional cases, minor use of approved insecticides may occur to prevent large-scale crop loss, as full organic certification is not always feasible in the Philippines' tropical climate.

Where necessary, **nutrient-rich fertiliser is applied via drip irrigation**, maintaining long-term soil health.

How do replacement trees work?

Each plantation includes a **buffer stock of replacement trees**, grown to the same age and size as trees held within the relevant fund(s).

If a tree held within a relevant fund is damaged or lost, a replacement is immediately assigned and replanted, ensuring **continuous yield performance**.

What happens if trees are destroyed or damaged?

All trees are covered under our **Harvest Security Guarantee**, which provides a **100 % replacement the guarantee** for losses caused by:

- Typhoons or storms
- Fire, lightning, or volcanic activity
- Floods
- Pests or disease
- Wild animal damage

Golden forests also conducts **quarterly inspections** of every plantation, ensuring all trees are well maintained, properly irrigated, and protected by 24-hour on-site security.

Documentation, Ownership, and Harvest

How many replacement trees are kept in the Philippines?

Roughly **20% of all trees** grown by **Golden Forests** are retained as replacement stock and are not allocated to investor-facing FUNDS.
replacement stock.

These trees are kept at different sites and used to replace trees of similar age and size held within the relevant fund(s) in the event of damage or loss.

How does Golden Forests monitor tree growth and yields?

Each tree's **GPS position, height, diameter, and crown** size will be recorded digitally.
During each harvest, we will record the **exact quantity and weight** of mangoes or Agarwood chips from every tree.

All data is used to calculate accurate yields per tree and per hectare.
Professional/corporate investors receive an **official harvest declaration**, certified by Golden Forests and verified by independent auditors.

What documentation will I receive for my subscription?

When you subscribe for shares in a fund, you will receive:

A **Subscription Agreement** for the relevant fund, setting out the terms of your subscription and issuance of shares.

A **Shareholders' Agreement** for the relevant fund, which governs shareholder rights, governance, reporting and other key terms.

Evidence of your shareholding in the relevant fund (for example, a **share certificate** and/or confirmation of entry in the **shareholder register**, as applicable).

Periodic audited reports and updates provided by the relevant fund (for example, plantation operations updates, harvest information and other shareholder communications) in accordance with the governing documents.

Share Transfer and Succession

Can I transfer my shares to someone else?

In principle, yes.

Transfers of shares are subject to the applicable provisions of the relevant FUND's constitutional documents and the **Shareholders' Agreement**, including any transfer restrictions, required approvals, and compliance checks. Any proposed transferee must also meet the **professional/corporate investor** eligibility requirements applicable to the offering. Once a transfer is completed, the fund will update its shareholder register and issue the appropriate confirmations in accordance with the governing documents.

What happens if I die or become incapacitated?

Your shares in the relevant fund form part of your estate and may be transmitted to your heirs or legal representatives in accordance with applicable law and the funds's governing documents (including any requirements relating to investor eligibility and registration of the transfer).

How much oud or wood chip yield can I expect per tree?

Based on extensive research and real-world experience, each Agarwood tree is expected to produce between **1.5 and 2 kg** of mid- to high-grade Agarwood chips.

Typically, **50 % of trees are harvested in Year 9**, and the remaining **50 % in Year 10**.

Yields may vary depending on growing conditions, but average production per tree remains consistent across plantations.

How long is the harvest period for mango trees?

Mango trees start producing fruit in **Years 4–5** and continue for about **25 years**.

After this time, yield levels naturally decline, and trees are typically replaced.

Will I receive annual distributions from the mango fund?

Distributions (if any) are determined at the fund level and are subject to the fund's financial position, operating requirements, and the terms of the governing documents. Where the mango plantation generates net harvest proceeds available for distribution, the relevant fund may make distributions to shareholders in accordance with the **Shareholders' Agreement** and applicable law. There is no guarantee of the timing or amount of any distributions. Harvest proceeds may be used to offset annual capital calls.

How to Invest

Before investing in forestry, it's important to **understand your goals** and **what you want to achieve**, just as you would with any other investment. Subscribing for shares in the relevant fund(s) may feel unfamiliar at first, but with careful thought and due diligence, it can become a **stable, long-term asset** in your portfolio.

These simple steps can help you make an informed and confident decision.

Who can invest, and what's the minimum subscription?

In line with applicable UAE regulatory requirements, the offering is available only to **established corporate and professional investors** (and is not offered to retail clients). The minimum investment is **USD 100,000**, which is used to subscribe to shares in one or both funds (the mango fund and/or the agarwood FUND). **Professional/corporate investors** are required to enter into a Subscription Agreement and a Shareholders' Agreement for each FUND they invest in.

Step 1: Clarify Your Goals

Ask yourself what you want from this investment.

Are you focused on **financial growth, portfolio diversification, or steady long-term income?**

Do you want an investment that provides **natural capital appreciation**, assets that keep growing even when markets fluctuate?

Remember, trees grow continuously, regardless of economic conditions. Forestry can therefore provide **stability and resilience** during uncertain times.

Step 2: Define Your Investment Horizon

Agroforestry is a long-term commitment, designed for professional/corporate investors seeking consistent growth rather than short-term speculation.

Decide whether you're investing for:

- **Regular income** from mango harvests
- **Medium-term profits** from Agarwood production
- **Future wealth** or **retirement planning**

By defining your timeframe and objectives, you can choose the investment structure that best matches your **financial goals** and **risk tolerance**.

Step 3: Get to Know the Project

Explore how Golden Forests operate, visit our plantations, and ask as many questions as you like.

We are fully transparent about our methods, technology, and results, and welcome every professional/corporate investor to see the plantations and relevant fund assets.

Our plantations are located near beautiful locations and beaches, making every visit both **educational** and **memorable**.

Payments, Distributions, and Realistic Expectations

How and when will I receive any distribution (if declared)?

Any distributions (if declared) are paid by the relevant fund to its shareholders in accordance with the fund's governing documents and applicable law. The timing and method of payment are communicated to shareholders by the FUND as part of its shareholder communications, and are subject to customary operational, banking, and compliance processes.

Bank transfer in your preferred currency

In-person collection at our Manila office

What should I expect in terms of risk and outcomes?

Investing in plantation-based assets involves a range of risks and uncertainties, including (without limitation) agricultural, climatic, operational, pricing, regulatory, and counterparty risks. Outcomes may vary and are not guaranteed. The relevant offering materials and fund documentation describe the structure, key risks, and the basis on which the FUND may make distributions (if any). Prospective professional/corporate investors should review the documentation carefully and seek independent professional advice where appropriate.

Why Invest in Agroforestry in the Philippines?

Why should I consider investing in agroforestry in Asia — especially the Philippines?

Agroforestry is a well-established global sector with significant economic activity. However, investing in agroforestry and plantation-based assets involves risks and outcomes are not guaranteed. This FAQ is intended to provide a high-level overview; professional/corporate investors should rely on the relevant offering materials and FUND documentation when making any investment decision.

Agriculture and forestry remain in constant demand, offering reliable long-term growth and portfolio diversification. The **Philippines** is an especially attractive location due to its **booming economy**, **ideal tropical climate**, and **fertile farmland**, much of which is being converted from former sugar plantations to sustainable tree cultivation.

Our plantations are inland, away from coastal zones, and will therefore be protected from tsunamis, major floods, and volcanic activity. Labour costs and land prices are also lower than in many neighbouring Asian countries, supporting strong investment efficiency.

Isn't the Philippines opaque or risky for foreign investors?

The Philippines has a clear and transparent legal framework for foreign investors in agriculture. Our plantations will be audited **annually by an independent firm**, which will count and verify every single tree.

We also invite professional/corporate investors to visit the plantations in person, so they can see first-hand how operations are managed and maintained to high standards (subject to scheduling and applicable visitor requirements).

What's the advantage of investing in tangible assets?

Investing in **real, physical assets** such as trees provides strong **protection against inflation** and **portfolio diversification**. Tangible assets like trees grow naturally over time.

Plantation-based investments may generate cash flows through **distributions from harvest proceeds (if declared)**, supported by global demand for agricultural and forestry products. They can also provide exposure to real assets outside traditional markets, which some professional/corporate investors consider when seeking long-term diversification. Outcome is not guaranteed.
